**Re: Centennial Parkway, Grimsby Mile 38.04, CN Bridge Replacement
Contract**

torontozenith.com

I would like to thank Birmingham for completing the above captioned Project in a timely, cost effective & professional manner for Toronto Zenith Contracting.

Their work consisted of providing a roadway protection system along busy Centennial Ave. in Hamilton Ontario. A complex AREMA track protection system was also installed in multiple construction stages alongside an active CN rail line including installation of foundation H-Piles for the new rail bridge.

The work required challenging design changes during construction and was completed successfully in close proximity to a high pressure gas main. Birmingham is commended for their outstanding achievement in meeting the strict health and safety requirements of the project and for their ability to react to changing situations which arose during construction.

Toronto Zenith looks forward to working with Birmingham on future projects.

Sincerely,

Since 1959

Brian Morris
Vice President, Construction
