**Re: Contract No. MTO 2008-2018
Highway 400/King Road Interchange**

Dear Sirs:

VIA E-MAIL ONLY

Soncinc Construction is the bridge sub-contractor to Fermar Paving Ltd. on the MTO Highway 400 and King Road interchange project. The 2-span, multi-lane bridge over Highway 400 was designed with integral abutments and had to be constructed in 2 stages. Birmingham Foundation Solutions [Birmingham] was Soncinc's foundation specialist on the project installing the abutment and temporary shoring piles. Birmingham's experience and professionalism was demonstrated throughout the project and contributed to Soncinc delivering an aggressive construction schedule. In addition, Birmingham's quality control of their operation was top notch and Birmingham delivered a deviation-free product while working in tight quarters in a heavily traveled commuter corridor. Birmingham always responded promptly to requests for additional information requests from and worked co-operatively with all parties.

Soncinc Construction looks forward to future business endeavors with Birmingham.

SONCIN CONSTRUCTION
