Re: City of Sarnia – Devine Street Sanitary Pumping Station

I would like to recognize Birmingham Foundation Solutions for their commitment and service to: design, install, and inspect the unsupported 17.0m diameter secant wall shoring system for a 14.5m deep foundation at the Devine Street Sanitary Pumping Station. An extremely difficult soils condition and tight construction schedule proposed several challenges which were all successfully met by Birmingham as they provided a quality product while maintaining the construction schedule.

Birmingham's design, management, and site staff all worked efficiently throughout the design and construction process.

Stone Town look forward to the next opportunity to work together.

Kyle McCutcheon
Project Manager
