Re: 37" Box Lead System for 1:1 Batter Pile – CITGO Bulkhead Lake Charles, LA

Gentlemen:

F Miller Construction would like to thank Birmingham for the superb service in supplying the 37" x 140' Box Lead System for 1:1 W33 Batter Piles driven at referenced project. This project was very fast track, and you provided engineering, fabrication and delivery in sufficient time for us to complete the project as our owner requested.

These leads included special suspension rigging allowing our 9320 American Crane to safely handle the 110' piles while driving full length. The lead also included a bottom mounted hydraulic winch, with head section sheaves allowing us to raise and lower hammer and pile together.

Thank you again for your superb performance. We look forward to working with Birmingham again.

Sincerely,
F. Miller Construction, LLC

Mark Boudreaux
Senior Project Manager
