HAMMERS AND VERTICAL TRAVEL LEAD SYSTEMS FOR LOCOMOTIVE CRANES

History

- Established in 1897, Bermingham Construction Company has for over a century been an accomplished leader in the foundation business. In the early 1960's the Canadian National Railroad approached Bill Bermingham about adapting his very successful Vertical Travel Lead design to a railroad application. This system was being used exclusively on the construction projects for Bermingham. The Railroad was very persistent and eventually Bill agreed to retrofit one of the railroad cranes with a set of Vertical Travel Leads and a Bermingham designed Diesel Pile Hammer. This venture was a great success and was adopted as the industry standard.

Accessories and Railroad Innovations
